A downward-looking i is the beam number. ADCP was mounted and run on the opposite side of the boat (fig. 6) while the sample bottle filled (about 60 seconds). EI ABS values, and by extension SSC values, in the bin data collected from the bin in each of the four transducer closest to the upward-looking ADCP (bin 1) were consistently beams closest to the depth of the P - 61 sampler were averaged low relative to bin 2. The resulting ABS depth-profile was according to equation 9. inconsistent with independent observations of sediment River-water samples were collected at various times concentration and optical backscatter in the depth profile.
