Reviews

This pdf is indeed gripping and interesting. It is definitely simplistic but shocks within the 50 percent of your book. Once you begin to read the book, it is extremely difficult to leave it before concluding.
(Michael Spinka)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 326 pages. Original publisher: U. S. Environmental Protection Agency, 1995 Excerpt: . . . From the bottle, an intake line of precleaned teflon tubing was extended to the water depth selected for sampling. The four liter collection bottle when full was used to pour into separate sample bottles for analyses. Samples for volatile analyses were taken directly from the teflon intake line when used as a capillary tube. Water sampling of the inundated floodplain wetlands was accomplished from a boat. Individual sample bottles were directly submerged to a depth of approximately one foot and filled. For collection of water samples for ultra trace level analysis of mercury, the person collecting the sample wore a second pair of plastic gloves which extended the length of the arm. For each floodplain station, multiple sites were sampled for surface water and sediment analyses (Figures 2, 3, 4, 5, 6 and 7). The sampling sites in the floodplain wetlands are bracketed for clarity. These sites were haphazardly selected and not georeferenced with GPS readings; thus, their position shown in the former figures were general approximations relative to the river and other land marks. During the course of sampling in the floodplain wetlands, samples of fish were also collected for tissue analyses. Because of the active sampling strategy of electrofishing, the fish samples represented a composite of specimens rather than discreet samples for a specific site as was the case for water and sediments. Results of the fish tissue analyses are reported later in the fisheries section. Sediment samples were collected from the rivers navigation channel and the shallower, off channel areas of the river bed. Initially, sampling was accomplished at the first station (MT-0) with diver operated hand...
