

Proceedings of the Institution of Electrical Engineers Volume 35

By Institution Of Electrical Engineers

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1905 Excerpt: .of spares)? It is clear that the cost of production during these times should be dependent upon--(1) The fuel cost per unit. (2) The oil, water, waste, and stores. (3) The depreciation and repairs. All other charges--such as salaries, management, fitters wages, and running staff--ought to be left out of this cost, because the salaries woidd have to be paid whether the machinery was running loaded or not. Some time ago I made careful tests over a considerable period to discover the amount of coal used per unit for additional load. Deducting the lighting-up fuel, and all fuel which would have to be used whether the works were sending out energy or not, that is to say, the fuel used to keep the steam pipes warm, to keep the pumps running, and all radiation losses, I was surprised to find the following: --The amount of coal...
